

# Learn about the Post Settlement Governance Entity

## **What is the Post Settlement Governance Entity?**

The Post Settlement Governance Entity (PSGE) is a legal organisation created by a claimant group to oversee and manage their settlement assets. The purpose of the PSGE is:

- To guarantee responsible and effective management of the settlement assets
- To safeguard the long-term benefits of the settlement for future generations
- PSGE's act as a representative for the claimant group (our uri)

## **What does our proposed structure look like?**

The PSGE structure will include representatives tasked with managing the assets. Their key responsibilities encompass the following:

- Adhering to Trust Terms
- Acting in the best interests of the beneficiaries
- Maintaining accurate records
- Acting with impartiality
- Ensuring accountability and transparency
- Complying with laws and regulations

## **How will the PSGE function?**

We envision the PSGE operating independently of the organisational structure. It will function as a vessel to receive and allocate settlement assets to the tari, who will subsequently manage taxes, employee salaries, and resource planning.

## **What have we agreed upon so far?**

The PSGE should work in conjunction with existing frameworks, ensuring it is not merely a duplication but is specifically designed to meet the distinct needs of Waikaremoana, with leadership provided by the hapū, which holds authority over the PSGE trustees.

## **How will our PSGE be represented?**

The PSGE representatives will be a hapū decision, ensuring that decision-making mana rests with our hapū.

## **When will we make decisions about the PSGE?**

- Before voting on our representatives, we must accept the proposed PSGE structure.
- Voting information will be made available as soon as we are ready
- All registered uri will have a chance to vote on both the PSGE structure and the PSGE representatives
